Thriving in retirement

Is your head (and heart) in a good place?

Preparing mentally and emotionally is just as important as preparing financially. You'll likely go through several emotional stages as you adjust to your new lifestyle.

- **Disenchantment** – The emotional high wears off, and you may start feeling bored or disillusioned if your expectations haven't been met. You may feel isolated and removed from many of the things that were once so important in your life, as well as the people that you used to spend most of your time with.
- **Readjusting** – It is time to create a new identity and find a purpose that is separate from who you were. Familiarize yourself with your new circumstances and learn to navigate the social and emotional aspects. Establish a routine that allows you to relax and enjoy this time of your life.
- **Moving on** – Settle into a new daily routine, on your terms.
- **The planning phase** – Your entire career has been spent saving and planning for what you will do next. The anticipation builds.
- **The big day** – Taking that step you have planned for is here. Celebration ensues and the future is bright.
- **Honeymoon phase** – After the handshakes and hugs, you and your spouse will throw yourself into your new life, enjoying all the things you didn't have time for before. You'll travel, indulge in hobbies, spend time with the grandkids. Then, maybe, you'll realize you still have spare time.

YOU'LL SPEND IT?

Balancing your financial reality with the lifestyle you want to create takes some finesse. But it's worth the effort so you can create an income stream designed to cover your basic needs and wants, when you're no longer working full time.

Identify needs and wants. Re-evaluate your expenses and determine which income sources will be used to cover those that fall in the needs category (e.g., mortgage/rent, food, healthcare) and those that are optional wants (e.g., country club memberships, a boat). Remember, these things will change over time, so revisit this often.

LET'S TALK ABOUT IT

YOUR ASSETS AND A SUSTAINABLE WITHDRAWAL STRATEGY

You've spent decades saving for your future, and now it's time to use that money wisely. First we'll take inventory, so you know what you have, and then we'll discuss when and how to withdraw assets to create a sustainable and tax-efficient income stream.

Expected, reliable income sources pay for basic needs.

Social Security

Annuity and pension payments

Employment income

Other assets can be used to cover additional needs, and then pay for wants.

Employer-sponsored retirement accounts
Roth and traditional IRAs
Checking/savings accounts
Brokerage accounts
Insurance
Rental income

LET'S START WITH THREE QUESTIONS

- 1. WHAT DO YOU NEED?**
- 2. WHAT DO YOU WANT?**
- 3. HOW WILL YOU PAY FOR IT?**

Get disciplined. Develop and stick to a long-term spending plan that balances your needs and your wants and is designed to make your money last as long as you do.

Assess your obligations. Be realistic about how much financial help you'll be able to give to aging parents or adult children, while still covering your retirement needs.

Plan for required distributions. When you turn 70½, you'll be required to take a certain percentage of your 401(k) or IRA assets as a withdrawal. Your annual RMD is determined by an IRS formula based on the total value of your retirement account and your life expectancy. In almost all cases, RMDs are going to be taxed as ordinary income. RMDs are required for a reason, so make sure you take them. Whatever you didn't take out can be taxed at 50%.

Maximize government benefits. We'll work with you and your spouse to develop strategies designed to maximize your overall household Social Security and Medicare benefits.

Simplify. Consolidate your various income sources into a "big picture" account and create a strategy to replicate the consistency of a paycheck. Having all your income together can help you keep better track of your cash flow and expenses.

Work with your advisor to prioritize which of your retirement assets you'll tap into first and at what rate. Certain accounts will require minimum distributions, so you'll want to save other assets for later, including your brokerage account. You'll also want to create a tax efficient income stream that allows your investments to continue to grow.

WHAT KEEPS YOU UP AT NIGHT?

Are you worried that your money won't last or that your health will take an unexpected turn for the worse? While we can't predict what's around the corner, we can save for a rainy day. That way an unexpected event won't derail your retirement plans. So what can you do?

Expect the unexpected. Unknowns such as a decline in health or a market correction can derail even the best-laid plans. Have a cash fund (or line of credit) in place to cover contingencies that may crop up.

Manage risks. Work with a knowledgeable team of professionals to manage the investment and lifestyle risks that could compromise your vision of retirement. Regularly review your risk tolerance; it may be very different now that you're no longer working. Be sure to adjust your asset allocation and mix of investments accordingly (perhaps make your portfolio a little more conservative or include insurance products). While diversification doesn't guarantee against losses, it may help you weather market volatility.

Review your portfolio. Together, we can regularly review your investments and make necessary adjustments

as your life and needs change over time. If you get off track, discuss steps to take to improve your financial situation. For example, you could wait longer to take Social Security or retire later. You could downsize your home and save more. There are several areas where you can make adjustments to help you get back on track for a secure and comfortable retirement.

Invest for the long term. Maintain exposure to equities as well as income products. You'll need the growth component to replace money you withdraw and to attempt to keep up with inflation.

ARE YOUR DUCKS IN A ROW?

While this stage of your life offers you more flexibility to do as you please, there are some logistics you should be aware of – and on top of – as you continue your life's journey.

Protect your future. Work with your advisor to make sure you've got adequate life, health, long-term care and other coverage to protect your wealth and preserve your assets. You'll also want to compare Medicare policies to determine which works best for your needs.

Protect your legacy. Update beneficiaries on all accounts to reflect your current wishes and family circumstances. While you're at it, review and update all estate planning documents, including trusts, wills, living wills and powers of attorney. We can help you coordinate with the appropriate professionals. Get generous. Outline your philanthropic wishes and put a plan in writing to help accomplish those goals with a tax-efficient giving strategy. Consider tangible gifts (e.g., art, real estate, antiques) as well as gifts of cash or stock.

What may lie ahead

There are several challenges retirees generally face. Identify those most likely to affect you and to what extent. Then work to create a safety net to address these risks.

1. Outliving your money
2. Spending beyond your means
3. Rising costs/inflation
4. Volatile markets
5. Unknowns/what ifs

Have you thought about CONVERTING TO A ROTH IRA?

You may be eligible to convert a traditional IRA to a Roth IRA for potential tax-free growth without required minimum distributions. Plus, you can withdraw earnings tax-free (as long as certain conditions are met). There are other rules, so let's discuss whether this makes sense for you.

Rolling from a traditional IRA into a Roth IRA may involve additional taxation. Unless certain criteria are met, Roth IRA owners must be 59½ or older and have held the IRA for five years before tax-free withdrawals are permitted. Additionally, each converted amount is subject to its own five-year holding period.

Congratulations! You're embarking on a whole new journey as you say farewell to the 9 to 5 in favor of a more relaxed – or more exciting – lifestyle. As you look to the future, we'll be here to help you monitor and adjust your financial plan so you have a better chance of achieving the retirement you've always imagined.

Please note, changes in tax laws or regulations may occur at any time and could substantially impact your situation. Raymond James financial advisors do not render advice on tax or legal matters. You should discuss any tax or legal matters with the appropriate professional.

Weekly Commentary

Raise your hand if you saw that one coming.

Despite falling bond yields and continued recession concerns, a Chinese request for “calm” in the trade war lifted the S&P 500 to its best week since June with the index rising 2.8%. And with that, a wild August has come to an end. Even with the past week’s gains, it was a painful month for investors. The S&P 500 dropped 1.8% for the month.

August’s declines left the market close to pricing in a recession. The 10-year Treasury yield fell 0.531 percentage points, to 1.503%, in August, its largest monthly drop since 2011, leaving it trading below the 1.508% yield on the two-year issue—yes, another yield-curve inversion. At the same time, investors shunned stocks that depend on economic growth for gains, writes Merrill Lynch strategist David Woo. He notes that the ratio of the S&P 500 Industrial Sector Index to the S&P 500 has dropped to its lowest level since investors were freaking out about a hard landing in China in 2015. It is now “consensus” that a recession is on its way.

But is it really? President Donald Trump is gearing up for the 2020 election, and a recession during the second half of a president’s first term is quite rare. Since Nixon was first elected in 1968, there have been nine presidents, but only two experienced recessions in the run-up to re-election. Woo blames an Iranian revolution-triggered oil spike for the 1980 recession that cost Carter re-election, while George H.W. Bush lost to Bill Clinton after the Iraq War led to a slowdown.

There’s a good reason that presidents usually don’t face recessions when running for re-election—they control many of the tools to prevent one. The surest way to prevent one now would be for Trump to end the trade war. “Trump’s trade war with China is feeding recession concerns that are becoming self-reinforcing,” Woo writes.

Does that mean it’s time to load up on stocks? Um, no. The trade war lingers, despite the latest de-escalation. Political unrest in Hong Kong may be approaching a turning point after China banned protests scheduled for Saturday morning. Meanwhile, the 10-year Treasury yield dropped below the S&P 500’s dividend yield on Aug. 5, usually a sign that stocks are undervalued, says Wells Fargo strategist Chris Harvey. Since then, the S&P 500 has rallied 2.9%, close enough to the 4.3% average in the month following such occurrences to make Harvey urge caution.

“You’re better off waiting for a better opportunity” to put money to work, he says.

TURNING BACK THE CLOCK TO 1999

September 4, 1999: The Cincinnati Reds set a National League record with 9 home runs as they rout the Philadelphia Phillies, 22-3.

Companies engaged in business related to a specific sector are subject to fierce competition and their products and services may be subject to rapid obsolescence. There are additional risks associated with investing in an individual sector, including limited diversification. The 10-year Treasury note is a debt obligation issued by the United States government with a maturity of 10 years upon initial issuance. U.S. government bonds and Treasury bills are guaranteed by the U.S. government and, if held to maturity, offer a fixed rate of return and guaranteed principal value. If bonds are sold prior to maturity, you may receive more or less than your initial investment. Holding bonds to term allows redemption at par value. There is an inverse relationship between interest rate movements and bond prices. Generally, when interest rates rise, bond prices fall and when interest rates fall, bond prices generally rise.

The yield curve is a graphic depiction of the relationship between the yield on bonds of the same credit quality but different maturities.

Investing in commodities is generally considered speculative because of the significant potential for investment loss. Their markets are likely to be volatile and there may be sharp price fluctuations even during periods when prices overall are rising.

There is no assurance any of the trends mentioned will continue or forecasts will occur. Forward looking data is subject to change at any time and there is no assurance that projections will be realized.

The companies engaged in the communications and technology industries are subject to fierce competition and their products and services may be subject to rapid obsolescence. Gold is subject to the special risks associated with investing in precious metals, including but not limited to: price may be subject to wide fluctuation; the market is relatively limited; the sources are concentrated in countries that have the potential for instability; and the market is unregulated. Be advised that investments in real estate and in REITs have various risks, including possible lack of liquidity and devaluation based on adverse economic and regulatory changes. Additionally, investments in REIT's will fluctuate with the value of the underlying properties, and the price at redemption may be more or less than the original price paid.

Diversification and asset allocation do not ensure a profit or protect against a loss.

Investing in oil involves special risks, including the potential adverse effects of state and federal regulation and may not be suitable for all investors.

International investing involves special risks, including currency fluctuations, differing financial accounting standards, and possible political and economic volatility.
